

CBSR AgenticFi Policy Infrastructure: Versioned, Citable and Time-Aware Rules for Autonomous Finance

Institutional technical whitepaper · version 0.11.0 · 20 August 2026

Research release candidate · external peer review and independent legal review not completed

CBSR provides deterministic research decision support. It is not legal advice, transaction approval or execution authority.

Status: research release candidate; external peer review and independent legal review not completed.

Non-claim: this document and CBSR outputs are not legal advice, transaction approval or execution authority.

1. Executive summary

CBSR is versioned policy infrastructure for cross-border stablecoin research and deterministic decision support. It keeps legal force, source provenance, freshness, uncertainty, human review and execution authority separate.

The 2026-08-20 snapshot contains 152 records across twelve jurisdictions. Its decision-ready subset is 0 because currentness and independent second review are incomplete.

Control implications

- Treat zero decision-ready records as a correct fail-closed result.
- Use receipts for traceability, never as transaction authority.

2. The evidence and responsibility gap

Autonomous finance can combine an action request with machine-readable rules faster than institutions can review changing legislation. Speed does not transfer legal responsibility from the operator, principal, regulated firm or adviser to the dataset.

CBSR requires evidence state and mandate scope to travel with every result. It does not decide who may lawfully rely on that result in a particular deployment.

Control implications

- Assign a named accountable owner for every production use.
- Escalate uncertainty instead of inventing permission.

3. Scope and non-claims

The unit of analysis is a jurisdiction–instrument–dimension proposition. Corridor and AgenticFi outputs are derived views and cannot create legal facts absent from source records.

CBSR is not legal advice, a sanctions service, an identity provider, a licensed execution venue, a payment instruction or a guarantee of regulatory acceptance.

Control implications

- Keep `execution_authorized=false` at every CBSR boundary.
- Obtain jurisdiction-specific advice before operational reliance.

4. Research method and source hierarchy

The method is a complete record census with an explicit source ledger, official-source disposition, pinpoint inventory, temporal fields and review workflow. Official material outranks secondary summaries, while unavailable material remains unavailable.

A cited official URL is not equivalent to completed line-by-line review. Primary review, independent second review and reconciliation are distinct events with distinct identities and dates.

Control implications

- Never infer a reviewer or checked date.
- Retain claims and methods in machine-readable form.

5. CBSR legal-evidence model

Evidence tier, source disposition, binding status, legal status, freshness, review stage and uncertainty are orthogonal fields. A plausible summary cannot silently become current, official and independently reconciled law.

Structural citability is an inventory filter. Decision readiness additionally requires official evidence, current SLA state and reconciled independent review.

Control implications

- Expose all evidence axes through API and MCP.
- Do not map legacy citable flags to unconditional allow.

6. Jurisdictional coverage and empirical findings

Coverage comprises twelve jurisdictions and 15 distinct dimensions. The quantitative dashboard reports every numerator with its denominator, unit and definition.

The baseline source-disposition distribution is {'official': 103, 'unavailable': 49}; freshness is {'stale': 38, 'unknown': 114}. Coverage is not a claim of completeness or legal currency.

Control implications

- Read jurisdiction dossiers with the record ledger.
- Preserve unavailable and unknown values as measured gaps.

7. Legal-event ontology

The ontology distinguishes consultation, proposed, enacted-not-commenced, finalized-policy-pending, operative, prohibited, no-regime and superseded states. Allowed transitions and date rules are versioned.

Every record receives an ontology row. A missing event link records modelling debt; it does not assert that no relevant legal event exists.

Control implications

- Reject reversed effective intervals.
- Require an explicit event before changing temporal state.

8. Temporal and freshness engine

Freshness is computed as of 2026-08-20 using binding-status SLAs. The baseline distribution is {'stale': 38, 'unknown': 114}.

last_reviewed is editorial history and cannot substitute for source_last_checked. Missing dates remain unknown, and expired checks cannot produce unconditional allow.

Control implications

- Persist source_last_checked and next_review_due in YAML.
- Block high-impact evidence that breaches SLA.

9. Domain-pack architecture

Generic policy models are separated from stablecoin-specific dimensions and obligations. The stablecoin domain pack declares its schema, ruleset version, supported categories and default obligation catalogue.

The MCP server is a thin composition root; data, evidence, events, domain packs, tools, serialization and API projection have explicit module boundaries.

Control implications

- Add future domains as versioned packs.
- Keep shared receipt semantics domain-neutral.

10. Deterministic action evaluation

The action schema covers action, authority, conditions, modality, obligations, exceptions, effective window, evidence and uncertainty alongside route, asset, amount and actor. Unknown schemas and malformed inputs fail closed.

Outcomes are allow, allow_with_conditions, review_required, prohibited and insufficient_evidence. Prohibitions and mandate violations precede positive evidence.

Control implications

- Use table-driven negative scenarios.
- Replay identical input, evidence and version to the identical receipt.

11. Agent identity, mandate and human approval

A mandate is versioned and time-bounded. It includes issuer, audit identity, assets, counterparties, amount limit, allowed and prohibited jurisdictions, execution windows and human-review thresholds.

Human approval is a condition produced by evaluation, not a signature or approval event. CBSR never records approval that an external control has not supplied.

Control implications

- Bind production mandates to an authenticated principal.
- Record approval evidence outside the unsigned CBSR receipt.

12. Know-your-agent considerations

The audit-identity structure names an agent subject, actor type, principal and session context. It preserves identity assertions without claiming that CBSR authenticated them.

A production know-your-agent programme must cover credential issuance, delegation, revocation, least privilege, model/tool provenance, monitoring and recourse.

Control implications

- Reject revoked or incomplete agent mandates.
- Separate authentication proof from policy evidence.

13. MCP, API and decision receipts

Six AgenticFi capabilities share typed contracts: search evidence, get rule, evaluate action, compare jurisdictions, watch changes and audit decision. Tool metadata is derived from one registry.

Receipts retain action, decision, rule IDs, sources, freshness, assumptions, uncertainty, mandate/audit identity, engine/ruleset versions, requested-as-of time and generation time. Component and receipt digests expose mutation.

Control implications

- Treat unsigned as integrity-only.
- Retain the fixed non-legal-advice notice in public results.

14. Security, privacy and threat model

Threats include evidence substitution, stale-law use, mandate overreach, prompt or tool injection, secret disclosure, dependency compromise, receipt tampering and sensitive action logging.

Controls include canonical serialization, negative tests, secret scanning, dependency audit, SBOM, least-privilege workflows and privacy-minimizing deployment guidance. External security review remains open.

Control implications

- Keep action payloads out of public telemetry.
- Verify scans and provenance in the actual remote workflow.

15. Governance, conflicts and corrections

Regulatory corrections follow a two-person evidence-promotion rule. A primary reviewer and different second reviewer must reconcile disagreements before decision-ready promotion.

Governance templates separate bugs, data-source proposals, regulatory corrections, security reports, releases and dependencies. Remote branch rules and reviewer requirements must be read back from GitHub.

Control implications

- Never self-certify independent review.
- Retain correction history and supersession links.

16. Quantitative findings

The data-quality dashboard covers jurisdiction and dimension coverage, URL and official-source ratios, evidence tiers, freshness, high-impact SLA, missing dates, uncertainty, reviewers, events, supersession, corridor classes and temporal sensitivity.

Results are descriptive census statistics of one repository snapshot. No sampling inference, causal effect or legal-compliance rate is estimated.

Control implications

- Use CSV/JSON for analysis and Markdown/SVG for inspection.
- Recompute every number through the canonical verifier.

17. Qualitative findings

A deterministic first-pass codebook classifies source-acquisition, evidence-tier, freshness, independent-review and event-model gaps. A failure taxonomy links those codes to controls and threats.

The second-coder worksheet is blank by design. Without a qualified independent pass, no intercoder statistic or independently validated theme is reported.

Control implications

- Keep exploratory findings labelled exploratory.
- Reconcile disagreements before publication claims.

18. SDG alignment

Design alignment is mapped to primary targets 9.1, 16.6, 16.10 and 17.18 and secondary targets 8.10 and 16.4. Each row carries evidence, an indicator, claim strength and causal/data limitations.

No UN endorsement, measured development impact or causal attribution is claimed.

Control implications

- Measure project outputs before impact claims.
- Retain target-specific limitations.

19. Global Digital Compact and DPI safeguard alignment

The GDC mapping covers human rights, inclusion, data governance, safety, digital public infrastructure and accountability. The DPI assessment covers F1–F9, O1–O9 and thirteen linked risk groups.

These are repository self-assessments, not official determinations. Deployment-specific human-rights, privacy, inclusion and remedy assessments remain necessary.

Control implications

- Document residual deployment risk.
- Do not imply institutional endorsement.

20. DPG Standard readiness

The DPG matrix covers indicators 1–8 and 9A–9C separately with interpretation, evidence, owner, reviewed date, target date, verification command and next action.

Met means that cited repository evidence exists. It does not mean that the DPGA has assessed, listed or certified CBSR.

Control implications

- Use the submission-readiness package only after external gates close.
- Preserve external_determination=false.

21. Pilot cases

Pilot 1 evaluates a conditioned enterprise US-to-EU stablecoin payment. Pilot 2 evaluates the stablecoin payment leg of a Singapore-to-EU tokenized green-asset delivery-versus-payment request.

Both pilots enumerate actors, assumptions, sources, rules, decision paths, human triggers, receipts, limitations and failure cases. Controlled current/reconciled fixtures test mechanics without promoting committed legal records.

Control implications

- Do not execute either pilot.
- Obtain separate securities, green-taxonomy, sanctions and identity analysis.

22. Tests, evaluation and failure cases

The AgenticFi catalogue contains 31 policy scenarios and 13 receipt mutations, including malformed, unknown-record, superseded, time-bound, prohibited-jurisdiction and conflict paths.

The canonical verifier also exercises legacy and directed negative gates, schemas, research reproduction, package reproducibility, clean-wheel MCP smoke, SBOM and dependency audit.

Control implications

- Treat each gate as atomic and fail-fast.
- Retain verifier summaries as scoped evidence.

23. Adoption and integration model

Adopters consume a pinned wheel or source checkout, a versioned dataset and explicit policy schemas. Integration begins in read-only decision-support mode with no funds movement.

Progression requires authenticated mandates, jurisdictional counsel, data-protection analysis, incident response, observability, approval evidence and rollback testing.

Control implications

- Start with shadow decisions and compare outcomes.
- Pin dataset, engine, ruleset and constraints together.

24. Limitations

The binding limitation is legal currentness: official-source acquisition, complete primary review, independent second review and event linkage remain incomplete. No software change can manufacture those human facts.

Other limitations include jurisdiction selection, translation, prior-author coding, controlled-fixture realism, unsigned receipts, absent production identity and no remote ruleset/Windows readback in this ZIP.

Control implications

- Keep `release_ready=false` while hard gates remain open.
- Report limitations next to every score.

25. Three-year roadmap

Year one closes official-source, high-impact currentness, event and two-person review gaps while validating remote CI, Windows, security and governance controls. Year two adds independently reviewed domain packs and authenticated/signed receipts in controlled pilots.

Year three evaluates institutional adoption, interoperability, redress, longitudinal freshness and measurable public-interest outcomes. Each phase remains conditional on evidence and governance approval.

Control implications

- Fund recurring legal maintenance, not only software delivery.
- Publish roadmap progress with denominators and evidence.

26. Conclusion

CBSR shows that policy automation can become more conservative as uncertainty rises. Missing evidence, stale review, conflicting interpretations and mandate ambiguity are explicit states, not prompts to guess.

The engineering package is designed to reproduce locally. Legal, security, peer-review and repository-control assurance remains a human and external responsibility.

Control implications

- Preserve the fail-closed boundary.
- Release only after the documented external gates close.

27. Primary-source bibliography

This is a deduplicated inventory of source citations in the register. Inclusion does not imply a completed currentness or independent-review check.

56. Payment Services Act (Electronic Payment Instruments regime, in force 1 Jun 2023) as amended by Act No. 66 of 2025. Regulators — FSA single supervisor; Local Finance Bureaus by delegation. <https://laws.e-gov.go.jp/>
57. Payment Services Act 2019 / MAS Single-Currency Stablecoin Regulatory Framework. SCS framework: label/disclosure on distribution. <https://www.mas.gov.sg/news/media-releases/2023/mas-finalises-stablecoin-regulatory-framework>
58. Payment Services Act commencement + FSA registrations (JPYC; USDC via SBI VC Trade). Timeline — EPI 1 Jun 2023; USDC Mar 2025; Act 66/2025 Jun 2025; JPYC 27 Oct 2025; megabank trust token by FY2026. <https://laws.e-gov.go.jp/>
59. Payment Services Act; Act No. 66 of 2025 (trust-type backing relaxation). Reserve/backing — full backing baseline; trust-type up to 50% short-term low-risk assets (Act 66/2025). <https://laws.e-gov.go.jp/>
60. Payment Services Act; FSA framework (by entity type). Capital — by entity type (banking / funds-transfer / trust); no separate aggregate cap. <https://laws.e-gov.go.jp/>
61. Personal Data (Privacy) Ordinance (PDPO); s.33 (cross-border transfer, not yet commenced). PDPO (Cap. 486) data obligations; HKMA outsourcing/data guidance. <https://www.elegislation.gov.hk/hk/cap656>
62. Presidential Gazette No. 7872 (Virtual Asset Service Act); CBC policy materials require separate mapping. Monetary sovereignty: framework enacted, operative cap and peg-currency decision pending (not commenced). <https://www.president.gov.tw/File/Doc/69812613-22f1-4288-940e-c40903b232e1>
63. Regulation (EU) 2023/1114 (MiCA). Titles III/IV; EBA/ESMA/NCA supervisory architecture. <https://eur-lex.europa.eu/eli/reg/2023/1114/oj/eng>
64. Regulation (EU) 2023/1114 (MiCA), Art. 58(3) (applying the Art. 23 means-of-exchange thresholds to non-EU-currency EMTs). Art. 58(3) (applying Art. 23 mutatis mutandis to non-EU-currency EMTs). <https://eur-lex.europa.eu/eli/reg/2023/1114/oj/eng>
65. Regulation (EU) 2023/1114 (MiCA), Article 50. Art. 50 (no interest paid to EMT holders). <https://eur-lex.europa.eu/eli/reg/2023/1114/oj/eng>
66. Regulation (EU) 2023/1114 (MiCA), reserve composition provisions. reserve composition set in MiCA + Level-2 RTS; deposit-% pinpoint pending RTS line-read. <https://eur-lex.europa.eu/eli/reg/2023/1114/oj/eng>
67. Res BCB 519/2025 (authorisation regime); Res BCB 520/2025 Art. 4 (provider modalities). Lei 14.478/2022 (BCB authorisation required to provide virtual-asset services); Res BCB 519/2025 (authorisation process); Res BCB 520/2025 Art. 4 (three SPSAV modalities: intermediária, custodiante, corretora), Art. 14 (sociedade limitada/anônima; ≥3 administrators; head office in Brazil); authorisation deadline 30 Oct 2026 (270 days). [https://www.bcb.gov.br/estabilidadefinanceira/exibenormativo?tipo=Resolução BCB&numero=519](https://www.bcb.gov.br/estabilidadefinanceira/exibenormativo?tipo=Resolução%20BCB&numero=519)
68. Res BCB 520/2025 (proof-of-reserves + biennial independent audit + published reports); Res BCB 521/2025 Art. 82-A (monthly BCB reporting); IN BCB 701 (22 Jan 2026). Res BCB 520/2025 (proof of reserves; periodic audits; transparent information flows); Res BCB 521/2025 (monthly FX-operations reporting from 4 May 2026). [https://www.bcb.gov.br/estabilidadefinanceira/exibenormativo?tipo=Resolução BCB&numero=520](https://www.bcb.gov.br/estabilidadefinanceira/exibenormativo?tipo=Resolução%20BCB&numero=520)

69. Res BCB 520/2025 Art. 44 (Travel Rule) + Art. 89 (two-stage phase-in: domestic by Feb 2027, international by 2 Feb 2028) + Art. 88 (authorisation adjustment period — 270-day adequação; internal controls / cybersecurity / Law 13.810/2019); Res BCB 521/2025 (KYT / self-hosted wallets). Res BCB 520/2025 (PLD/FTP obligations on SPSAVs; ≥3 responsible administrators including AML/CFT; GAFI Recs 15-16 alignment); Lei 14.478/2022.
<https://www.bcb.gov.br/estabilidadefinanceira/exibenormativo?tipo=Resolucao%20BCB&numero=520>
70. Res BCB 520/2025 — patrimonial segregation (segregação patrimonial). Res BCB 520/2025 (patrimonial segregation: client funds in individualised payment/deposit accounts; client virtual assets in segregated wallets; foreign-custodian conditions — home-country authorisation/supervision, Brazil representative, enforceable guarantees, formal segregation of Brazilian clients' assets).
<https://www.bcb.gov.br/estabilidadefinanceira/exibenormativo?tipo=Resolucao%20BCB&numero=520>
71. Res BCB 520/2025 — stablecoin definition + asset-curation / listing-policy rules. Res BCB 520/2025 Art. 2, III (reserve assets of a fiat-referenced token = the fiduciary currency and public debt issued by the same governments); Arts. 64+ (asset curation; algorithmic-stablecoin prohibition; proof of reserves).
<https://www.bcb.gov.br/estabilidadefinanceira/exibenormativo?tipo=Resolucao%20BCB&numero=520>
72. Res BCB 521/2025 (FX reclassification + caps); Res BCB 561/2026 (eFX exclusion); Lei 14.286/2021. Res BCB 521/2025 (amends Res 277/278/279 of 31 Dec 2022): virtual-asset services brought into the FX market — international payments/transfers, stablecoin trades, and payment of expenses abroad treated as câmbio operations; monthly reporting to the BCB from 4 May 2026.
<https://www.bcb.gov.br/estabilidadefinanceira/exibenormativo?tipo=Resolucao%20BCB&numero=521>
73. Res BCB 521/2025 (virtual assets in the FX market); Lei 14.286/2021 (Foreign Exchange Law). Res BCB 521 — per-operation caps (USD 100k SPSAV / USD 500k FX-FI when counterparty not FX-authorised); amends the Res 277/278/279 FX trio, inserting Art. 76-A into Res 277/2022 as the câmbio-inclusion hook (legal base: Lei 14.286/2021).
<https://www.bcb.gov.br/estabilidadefinanceira/exibenormativo?tipo=Resolucao%20BCB&numero=521>
74. Resolução Conjunta CMN/BCB nº 14/2025; Res BCB 517/2025 (both 3 Nov 2025) — SPSAV minimum-capital methodology. Resolução Conjunta CMN/BCB nº 14/2025 + Res BCB nº 517/2025 (both 3 Nov 2025): minimum capital R\$10,800,000 to R\$37,200,000 scaled by the set of activities performed.
<https://www.bcb.gov.br/estabilidadefinanceira/exibenormativo?tipo=Resolucao%20BCB&numero=517>
75. *Reves v. Ernst & Young*, 494 U.S. 56 (1990); *SEC v. W.J. Howey Co.*, 328 U.S. 293 (1946); Investment Company Act of 1940 (registered MMFs); CLARITY Act market-structure provisions (pending). GENIUS Act securities carve-out (amending the '33/34 Acts and ICA40 for permitted payment stablecoins).
<https://www.congress.gov/bills/119th-congress/senate-bill/1582/text>
76. SI 2026/102, Art. 9M(2); FSMA s.418 (as amended); HM Treasury policy note. reg 9M(2) (issuing a qualifying stablecoin; all three limbs) vs HMT policy note (any one limb).

28. Reproducibility appendix

Canonical command

```
python -m pip install --constraint constraints/dev.txt ".[dev]"
python -m tools.verify
```

The verifier regenerates committed outputs twice, compares hashes, validates schemas and internal links, runs positive and negative tests, builds the wheel twice, installs it outside the repository, smokes all six AgenticFi capabilities, emits an SBOM and runs the dependency audit.

Claims traceability sample

Claim	Type	Evidence	Status	Strength	Limitation
claim-ae-pt-aml_kyc-001	record_level_legal_proposition	ae-pt-aml_kyc-001	pending_independent_review	limited	Not a current-law claim unless official, current and independently reconciled; inspect the record uncertainty and legal-force fields.
